

SACRED GEOMETRY

a *Fractal Gold* event

with Michael Rice - Architect
and Nicholas Kelly - Computer Scientist

San Francisco: 7th, 8th, 9th Sept. '09

Portland: 14th, 15th, 16th Sept. '09

Booking: www.holistichouseplans.com **Price:** \$700

Practical Applications Workshop

This advanced master class workshop focuses on the applications of sacred geometry to design, architecture, graphic, landscape and interior design. Day one is in a classroom environment where principles, practical examples and applications of sacred geometry to all aspects of design are presented. From the initial states of inspiration and imaging to the developed design and presentation.

Days two and three is an intense building master class which is a practical hands-on experience developed to demonstrate how to build a structure based on sacred geometry. In this workshop a sacred structure will be designed and built from start to finish, under the tutelage and expert guidance of a master geometer/builder. Particular attention and emphasis is being paid to show how to optimize building with curves and other natural forms.

This workshop is ideal for framers, builders, developers, architects, designers, as well as interested folk who want to discover the fastest and most optimal methods of building sacred architecture and creating sacred space.

Day one of this workshop may be attended by itself, contact for more details.

"It was an incredible experience to be involved in the design and the actual building of a sacred geometry based structure. I saw from start to finish how it should be done!"

David Hughs, Ireland
